

Limitless Device Integration

Technical Integration Report · Google Workspace & ChatGPT Sync

Project Overview

This project involved end-to-end configuration of a Limitless AI wearable device with a client's Google Workspace ecosystem — including Gmail, Google Calendar, and Google Tasks — and extending that integration to a ChatGPT account. The goal was to establish seamless, bidirectional data synchronisation across all platforms, managed through a single Google account.

CLIENT REQUIREMENT Connect Limitless device to Gmail Tasks & Google Calendar; sync both with ChatGPT via single Google account.	ENVIRONMENT Limitless Device (AI wearable), Google Workspace (Gmail, Calendar, Tasks), ChatGPT (web interface)
INTEGRATION TYPE OAuth 2.0 Authentication & API-level Connectivity	OUTCOME Fully functional bidirectional sync — no data loss or duplication

Challenges Addressed

1	Authenticating the Limitless device with the correct Google account permissions scope.
2	Enabling and configuring both Google Calendar API and Gmail API within Google Cloud Console.
3	Configuring ChatGPT to read from and write to Google Tasks via API middleware.
4	Establishing bidirectional synchronisation across all platforms without data duplication.

Solution Implemented

01**Step 1 — Google Cloud Console Setup**

Guided client through Google Cloud Console to enable Calendar and Gmail APIs. Created OAuth 2.0 credentials (client ID and secret) specific to the Limitless device. Configured authorized redirect URIs matching Limitless authentication requirements.

02**Step 2 — Limitless Device Authentication**

Authenticated the Limitless device using the full OAuth flow. Granted granular permissions: read/write calendar events, read/manage tasks, and Gmail read access as needed. Verified successful token exchange and persistent authentication.

03**Step 3 — ChatGPT Integration**

Configured ChatGPT to access Google Tasks via API middleware. Enabled task creation, reading, and status updates from ChatGPT conversations. Verified that calendar events could be referenced and created within a ChatGPT session.

04**Step 4 — End-to-End Sync Testing**

Created a task in Gmail — confirmed it appeared in Limitless device and ChatGPT. Created a calendar event in ChatGPT — confirmed it reflected in Google Calendar and Limitless device. Verified zero data loss or duplication across all platforms.

Result

- ✓ Limitless device syncs fully with Gmail Tasks and Google Calendar in real time.
- ✓ ChatGPT can read and manipulate the same tasks and calendar events.
- ✓ All integrations are managed through a single Google account.
- ✓ No recurring issues — client can independently maintain the setup going forward.
